SCIENCE FAIR

“The Science of Today is the Technology of Tomorrow”

A science fair is undeniably a matchless opportunity for students to apply scientific methods in conducting independent research. The outcome of every student’s research is presented in the school’s science fair where the student’s efforts are showcased and are interviewed to determine their scientific merit.

In the Science Fair organized by Spring Board Academy, children from all the classes showcased different models such as Saline Alarm, DNA, LPG gas, Vegetable Carving and other models. Parents were also invited for the science fair to witness the science models that were exhibited by the students.
